DID YOU KNOW?

APM CAN DEVELOP A CUSTOM SEALING SOLUTION FOR YOUR NEED

A company in Middletown, Connecticut wanted to extend the capability of their popular multi-room audio system to allow keypad control from outdoor locations. To make the keypad weatherproof, they required a transparent seal that would permit reading the legends on the buttons, facilitate through-seal operation and be easily integrated into their keypad design and be mounted

to a standard outdoor electrical box. APM designed a single-piece, crystal-clear, precision-molded silicone rubber seal that nests neatly into a perimeter groove of the keypad's front plate assembly. This pliable, UV-tolerant seal permits easy viewing of the keypad

legends, operation of each button through the seal, tolerance to weather/dust, and molded-in recesses for the mounting screws.

WHY DO SOME CUSTOMERS ORDER SEALING BOOTS FOR SEALED SWITCHES WHEN THEY'RE ALREADY FACTORY SEALED?

Although this category is comprised of switches that are hermetically sealed (to

protect the contacts from being corroded or otherwise contaminated), their panel mounting holes are still exposed to moisture and leakage penetration. Every HEXSEAL® and E-SEEL® is designed with a patented perimeter seal that surrounds and vacuum protects the mounting hole and prevents bad things from reaching exposed circuit boards, etc.
