APM NEWS

APM Hexseal's Patented **Inverted Bellows Toggle Switch Boot** avoids unintentionally tripping the switch.

Avoid unintentionally tripping a sensitive breaker/switch into the on/off position by attaching the patented **APM Hexseal 1131/60** or **1132/60** inverted bellows toggle switch boot. There are an increasing number of breaker/switches that when covered with an environmental sealing switch cover can trip the breaker/switch into the off/on position due to the mere physics of being covered by the wrong type of cover. Our **Ultra Flex Series** with a bellows design incorporated therein is very able to combat this problem! These boots protect the switch in even the most hostile environments.

DID YOU KNOW?

The use of LEDs is finding its way into a myriad of harsh environments for both indoor and outdoor electrical lighting applications. For example, **one leading** outdoor lamp fixture company has successfully developed an outdoor ceiling mounted fixture incorporating numerous LEDs per fixture with day and night power output requirements controlled by micro circuits.

These sealed enclosures were installed in an exceptionally long automobile tunnel.

Typical of all tunnels of this kind, **a great deal of corrosive, penetrating concrete dust** is formed over time. To assure

that the dust does not reach the LED fixture's internal control circuit or coat the LED's lens, it is imperative that the LED fixture be reliably sealed to operate for 15 years of continuous service without maintenance. To meet this requirement, **APM Hexseal's high-pressure self-sealing**

SEELSKREWS were chosen and installed around the LED fixture's perimeter. APM products perform in even the harshest environments.
