## CLIENT HIGHLIGHT

### Programmable Digital Panel Meter (DPM) from APM Hexseal and for Any Environment

When a client submitted the requisition for a DPM that would permit easy reading of switch markings, not compromise programming ease, resist discoloring due to extreme heat as well as protect from water, oils, grease, dirt and cleaning solvents: APM Hexseal delivered. The final product resulted as a custom single piece design with a full-bezel soft seal fabricated from a special transparent rubber. The form-fit design seals panel cut-out in which DPM's are mounted, while permitting operation of the units programming switches through the soft, flexible seal. Another example of why APM Hexseal is your sealing solution for any environment.

## DID YOU KNOW?

### Why hostile switch environment protection is needed?

Unsealed switches are internally susceptible to damage and shorting from water, lubricants, dust, dirt, sand, salt spray, corrosive atmospheres, fungus and other damaging contaminants. Even factory sealed switch function is susceptible to ice and dust build-up. And, all switch panel mounting cutouts are vulnerable to contaminant seepage including spilled soft drinks, coffee, etc. **APM's UL-recognized HEXSEAL® and E-SEEL®** sealing boots provide complete and reliable, cost-effective, long-term protection.

## ASK APM

### How APM HEXSEAL® & E-SEEL® Boots protect

Working closely with switch, potentiometer and circuit breaker manufacturers and users

for more than 60 years, **APM Hexseal** has developed an

extensive line of tough, pliant

silicone rubber (other materials available for specific environments) panel seals that function harmoniously

with the switch's manual and automatic operation and position status viewing. Our panel seals are UL 50 tested and

Recognized. In this age of recalls and expensive field

servicing, installing a **APM HEXSEAL** boot is the most

effective and least expensive way to protect and guard against switch, circuit breaker and potentiometer failures.
